Bite-size chunks of fresh melon – cut cleanly in a flash

With the practical tabletop model, fresh melons are cut into bite-size chunks (dividing insert for 6 or 8 pieces). The MMC 150 can cut melons with a diameter of up to 150 mm and a length of up to 200 mm into slices and chunks in a single pass. For this, the melons must have been peeled, halved and deseeded beforehand.

Manual operation of the robust device is extremely simple: The prepared melon is placed in the device’ s product holder. When the lever is pulled down, the melon is cut into even slices that are 15 or 20 mm thick. In the next step, the melon slices are fed through a dividing insert with the help of a pusher. The downholder prevents the product from slipping and guarantees a clean cut. The result: perfectly cut melon chunks that are ideal for use in fruit salads or as melon snacks packed in portions.

and easy to perform.

The MMC 150 is the ideal addition to the **MPC 100** manual pineapple chunk cutter for fruit processors.

Benefits

Two processing operations in one device for efficient melon processing

The MMC 150 melon chunk cutter combines two processing steps in one device to produce melon chunks with optimal cutting quality. First, the prepared melons are cut into slices (15 or 20 mm), which are then cut into 6 or 8 chunks.

The ideal tabletop device as an addition for complete melon processing

The **AMS 220** pineapple and melon peeling machine can be used to peel melons. The MMC 150 melon chunk cutter is the perfect addition for the final stage of processing and a perfect cut.
